ISTE252 – Foundations of Mobile Computing
Lab 3: A Mobile Site with AngularJS
Grading Rubric and Due Date is in the dropbox on MyCourses

For this exercise you will revise your mobile site by using AngularJS in place of JavaScript.

You should find all the sample code needed to complete this project in Week 3 in your MyCourses for this course. The files are labeled:

HelloShell.html (the first look at Angular directives and expressions)
Controllers (A angular app with a controller that handles reading data from an array)
Angular HTTP Request (An Angular app with a controller that reads a json file using the HTTP object)

You should not have to replace or modify your JSON data file.

You should also not have to replace or modify any of your CSS.

You should replace the use of JavaScript with Angular directives that utilize the code in your controllers.

DUE: Monday February 22ND at 11:59PM

NOTE: See the rubric on MYCOURSES for the grading criteria.
